

Industry	Steel	Customer	.
Sector	Wire drawing	Site	.
Responsible		Application	Wire drawing mill
Date	2016	Distributor	Optimol France

Before MEMOLUB :

- Old Automatic lubrication system

Machine (with brand if possible) :

- Schumag wire drawing mill

Detail of application :

- Lubrication of bronze slides

Why MEMOLUB :

The old system cause many production stops because it was really difficult to manage the right quantity of oil without production pollution.

Too much oil = slipping in clamping jaws, and too less oil = seizure

MEMOLUB solution:

Installation of MEMOLUB DS with liquid grease

Results :

Very good, customer can manage easily his lubrication.

The working environment is always clean. No production stops.

To complete this installation, the customer will install an automatic grease level connected to the machine.

No grease in DS system = machine stops.
